

Labeling your seeds will not only help you remember important details, but will also help others decide whether or not to take some of your seeds in a seed swap. For "location" you can note the county or the more specific location of your garden. Not sure if it's a native plant? You can check at [www.nyflora.org](http://www.nyflora.org).

The Watervliet\* Shakers developed the process of packing seeds in small envelopes for sale. Their seed industry began in the 1790s and involved all steps of production from growing vegetables, harvesting and processing seeds, producing envelopes and display boxes, packing seeds in paper envelopes, and actively marketing them to non-Shakers, known as “the World’s People.”

The Shakers became famous for their high-quality seeds and honest business practices.

\*The Shakers in Albany were known as the Watervliet Shakers because the town of Watervliet covered most of Albany County in the late 1770s when America’s first Shaker settlement was established near Albany.
